

Elevate your communities with help from real-time clinical data

When making decisions to benefit your residents, you need clinical data that is easy to find and interpret. How many resident falls occurred during a particular shift? What percentage of residents are vaccinated against COVID-19? With Yardi Senior IQ, an integrated business intelligence solution, this information is available at the click of a button.

Clinical data is drawn directly from Yardi EHR and presented via intuitive dashboards. That means you're equipped to track clinical trends, identify residents at risk, pinpoint problems and improve protocols — all from a single platform.

No more digging for answers or losing track of scattered data. With Senior IQ, you get the full clinical picture in one centralized place.

5 ways Senior IQ simplifies your clinical workflow

1 Analyze resident falls

Capture metrics such as falls categorized by time of day and falls resulting in injury — uncovering what is jeopardizing resident safety — then develop action plans to prevent future incidents. See details for each fall such as resident name, incident date, time and location.

2 Streamline reporting

Tap into insightful data that is automatically updated from the previous day. Each dashboard's data points were carefully selected by Yardi's clinical and compliance team to help you track quality measures and performance metrics.

3 Track vaccinations

Track exactly how many residents have accepted, received or declined important vaccinations. Use vaccination rates to make critical decisions regarding health and safety protocols.

4 Monitor antipsychotic usage

Check which residents are receiving antipsychotic medications, then verify that each resident has a proper diagnosis to ensure no antipsychotics are being administered without cause.

5 Unite clinical and financial data

Access census information, financials and clinical data in one place. Use these comprehensive insights to make informed decisions for your entire business.

Get a clinical snapshot

Looking for a quick clinical summary? Senior IQ organizes your most-needed metrics on a single dashboard including new orders, recent falls, past due assessments and more.

Improve care, boost productivity and reduce costs

By presenting up-to-date clinical information, Senior IQ helps you make smarter, faster decisions, all while eliminating risks, errors and expenses. Your data stays accurate — and secure — so you can focus on enhancing life for residents.

Did you know?

Streamline staffing with Senior IQ

Having a multifaceted business intelligence solution is key. You need functionality that supports every aspect of operating a community, including attracting and retaining staff. That is why Senior IQ offers staffing analysis and task reassignment tools — crafted to help you mitigate risk and ensure shift assignments meet resident care requirements.

Automatically drawing care information from Yardi EHR, Senior IQ allows your leadership and community teams to:

- Review workers, skillsets and task time allotments
- Identify overstaffed or understaffed shifts
- Make changes with drag-and-drop functionality

We're here to help.
